

Mechanical Engineering

Index of 2004 Articles

Abrams, Michael

The Sky's No Limit, January, page 84.

Aldrin, Buzz, and Wyn Wachhorst

The Urge to Explore It brought the first creatures from the sea onto the land; it sent us to the moon. Where shall we go next? November, pages 37-38.

Alexander, Dave

The Biggest Customer A standing contract can set up an engineering firm as a supplier to the federal government. *Engineering Management*, March, page 20.

Anderson, Roger, and Albert Boulanger

Smart Grids and the American Way The system must become automated, because decision speeds increasingly are becoming too fast for humans to manage. *Power & Energy*, March, pages 10-13.

Beardsley, Charles

Philadelphia Lights a Landmark, March, page 68.

Brown, Alan S.

Redefining the ME New technologies and skills change the profession as it seeks to fit a wide-open global marketplace. September, pages 34-38.

Simplifying Complexity—Again No matter how many hands are on the job, technology aims to keep the work flowing. March, pages 43-45.

Brown, Jim

Tools for All Jobs Technology must suit the business, especially if you have to be light on your feet. *Engineering Management*, March, pages 17-19.

Caldwell, Jim

Wind in the Pipeline To make wind power reliable, we must build new lines. But plenty of challenges exist. *Power & Energy*, March, pages 14-18.

Chiles, James R.

A Catch in Time Systems give warning before they break up. The trick is to listen—and learn. March, pages 36-38.

DeGaspari, John

High-Tech Delivery The U.S. Postal Service is automating its vast infrastructure to stand up to its competition. August, pages 38-42.

Hip Action Better ways to make ends meet aim to give the artificial ball and socket a new lease on life. December, pages 40-43.

Making the Grade From eddy current to X-ray, testing meth-

ods are under study to bring non-destructive evaluation into wider use. August, pages 26-29.

Retooling CAFE Corporate average fuel economy standards for light trucks are under the high beams. April, pages 24-27.

Sound Health, October, page 80.

Detchen, Reid

Restoring American Power The right steps now could take us to a brighter future. *Power & Energy*, October, pages 14-19.

Devico, N.J.

Blowing Hot & Cold Modeling the body's reactions provides clues for more efficient climate control. *Power & Energy*, October, pages 20-21.

Dubin, Cindy H.

Special Delivery Pharmaceutical companies aim to target their drugs with nano precision. *Nanotechnology*, September, pages 10-12.

Ehrenman, Gayle

Engineering With a Conscience Volunteers are using low-tech engineering to have a high impact in developing countries. April, pages 32-35.

From Foul to Fuel A new approach to fuel cells turns wastewater into clean water and electricity. June, pages 32-33.

From Sea to Sink With supplies of water under stress, the prospect of rendering saltwater drinkable is growing more appealing and more affordable. October, pages 38-43.

Pictures From the Deep, June, page 68.

Skating Past Injury, September, page 80.

Shrinking the Lab Down to Size Much of the technology is still in development, but some labs-on-a-chip are already on the market. May, pages 26-29.

Fama, James

Lessons of the Blackout Plenty has changed since the lights went out last year, but there is more work left to do. August, pages 34-37.

Frey, Daniel D., and Edward M. Greitzer

One Step at a Time Research suggests that this approach can provide a real benefit in engineering experimentation. July, pages 36-38.

Gibson, Tom

Tuned to the Universe Precision on a grand scale brings in clearer signals from distant time and space. December, pages 36-38.

Girshick, Steven L., and Arun Majumdar

Engineering Without Limit Mechanical engineers can stake a claim for the nanoscale frontier. But the only way to truly own it is to dissolve the old boundaries among disciplines. *Nanotechnology*, September, pages 4-8.

Gruber, Thomas C., Jr.

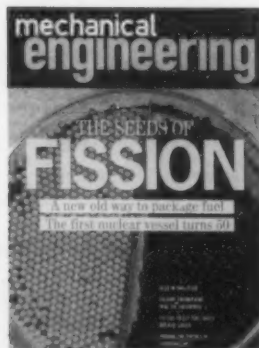

To Stand and Protect An infrared spectrometer sees harmful vapors at a distance. February, pages 40-41.

Haines, Steven

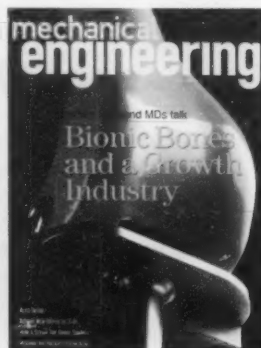

One Powerful Team Product manager, project manager—Although two letters make a big difference, everyone works for a common goal. *Engineering Management*, July, pages 7-8.

Harry, Mikel J., and J. Douglas Crawford

Six Sigma for the Little Guy Think you can't afford this business

initiative? Recent changes have made it more affordable and accessible than ever. *Engineering Management*, November, pages 8-10.

Hutchinson, Harry

Bottled Up, November, page 80.

Every Bag in Place The Las Vegas airport bets on radio waves. April, pages 42-43.

Rough Water The Navy designed a virtual ship—but was it tough enough? January, page 43-44.

Silent Running There are rewards for being quiet. February, pages 42-43.

Simple Medicine A medical device maker streamlines a mechanical design. August, page 43.

Supercool Protector A runaway-current limiter passes a test. October, page 48.

Zapping the Record The aptly named *Buckeye Bullet* speeds to a new standard for heavy electric cars. December, pages 48-49.

Hyer, Nancy, and Urban Wemmerlöv

Cell Manufacturing The hard part is to get people in step with the program. *Engineering Management*, March, pages 14-16.

Johnson, P. Dale

Maintaining Know-How Once they learn all the techniques, plant engineers are set to retire. May, page 42.

Koenig, Daniel

Financial Measurement If you own your own business, you need to understand some basic instruments that track fiscal soundness. *Engineering Management*, November, pages 11-12.

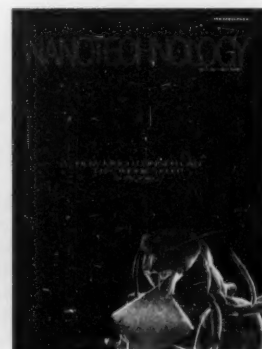

Kosanovic, Lisa

New Wires for Old Higher-capacity transmission cables aim to get more juice through the bottlenecks. *Power & Energy*, June, pages 18-19.

Running on Air Consider a fuel cell car stuck in traffic. Will it choke to death? January, pages 40-42.

April

Nanotechnology/April

May

June

Laird, Joyce

A Big Bone to Pick, July, page 68.

Langston, Lee

A Year of Turbulence After a sharp decline in orders in the electric power industry, there's a prediction of clear skies ahead. *Power & Energy*, June, pages 6-10.

Lockshin, Roman

Intelligent Implementation Bringing a new technology system on board is never easy for any manager. Here are some things to make the process smoother. *Engineering Management*, July, pages 18-20.

Longuski, Jim

Why to Make Your Manager Look Good Invaluable career advice: It's not the money or the work that makes the big difference on the job. *Engineering Management*, July, pages 9-11.

Lyman, Frederic A.

A Practical Hero Or, how an obscure New York mechanic got a steam-powered toy to drive sawmills. February, pages 36-38.

McCullough, Robert N.

Calculating Coefficients A century ago, after the first flight: What had the Wrights really proved? Well, for starters, more accurate math. April, pages 36-38.

Mechanical Engineering Staff

Airing Out Grand Central Searching the fluid dynamics of trains and their surroundings. *Mechanical Engineering Design*, February, pages 26-28.

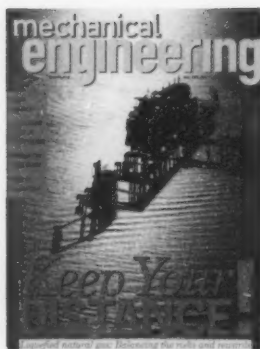

Blood Ties An engineering team rethinks the key link in cardiac surgery, the heart-lung machine. *Mechanical Engineering Design*, February, pages 22-24.

Clearing the Skies of Texas A new technology promises to reduce the emissions from gas-fired power plants. September, page 45.

Exhaust-Gas Throttle With the right control, it can boost en-

August

gine efficiency. June, page 37.

The Mechanics of Woods A U.S. lab is trying to design economic incentives for removing some of the tinder from the country's forests. July, pages 40-42.

In a Mechanism Far, Far Away The Webb telescope will go almost a million miles out to see how stars were born, so there's only one chance to make it right. April, pages 40-41.

Neatness Doesn't Count The design for a fuel cell confronts the fickleness of the real world. January, page 45.

Remade From Scratch A military-sponsored project mounts a collaborative effort to reverse engineer legacy parts. *Mechanical Engineering Design*, February, pages 12-15.

Mendez, Patricio, Stuart B. Brown, and Thomas W. Eagar

Putting It in Scale, *Mechanical Engineering Design*, February, pages 16-20.

Noor, Ahmed K., and James A. Cutts

Space Calls Needed: The technological expertise that will invent a new age of exploration. November, pages 30-36.

Palumbo, Robert, Anton Meier, Christian Wiekert, and Aldo Steinfeld

Packaging Sunlight Methods under study aim to capture solar energy where it is abundant and deliver it where it is needed. *Power & Energy*, March, pages 19-23.

Papay, Lawrence T.

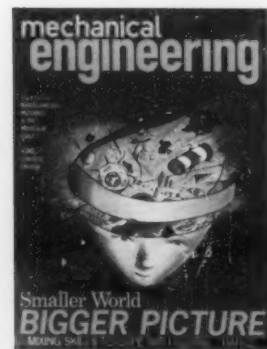

Can We Rely on the Grid? Before investing in new power transmission technologies, we must first examine what we need in terms of electric reliability. *Power & Energy*, March, pages 6-9.

Peace, Steven

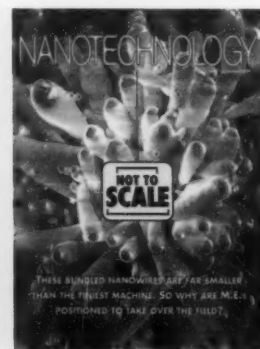

Another Approach to Wind Vertical-axis turbines may avoid the limitations of today's propeller-like machines. June, pages 28-31.

Rorrer, Ronald A.L.

Evaluating Your Next Employer A job-seeker takes a look at management. *Engineering Management*, November, pages 6-7.

September

Nanotechnology/September

Saif, Taher

Scaling the Depths Before we can make nanotechnology a reality, we need a better understanding of fundamental properties at the molecular level. *Nanotechnology*, April, pages 8-11.

Schmidt, Darren D.

Cashing in the Chips A portable system aims to make it practical to take the electricity out of small waste heaps. *Power & Energy*, October, pages 22-23.

Sharke, Paul

Eyes of Mars Actually, they're cameras, helping robots work a little easier in an untidy world. September, pages 40-44.

Freedom of Choice The fuel cell vehicle has a long way to go. Maybe those part electric-powered, part gasoline-burning cars will help clear the way. October, pages 32-35.

The Machinery of Life Between physics and biology lies a rift in language that doctors and engineers must cross before they heal the sick. February, pages 30-34.

Murphy's Lawyers Watching for whatever can go wrong, because it will. May, pages 36-41.

Not Even the Kitchen Sink Go fast and light, say today's hikers. Outdoor gear designers trammel lots of ground getting them there. August, pages 44-47.

Two if by Sea The latest thinking on LNG says to locate new terminals far beyond the backyards. July, pages 24-29.

Water, Paper, Glass The inability of some fluids to mix makes for a fine focus in a tight space. May, pages 30-32.

Siegel, R.P.

Down But Not Out Checked in court, Jerome Lemelson's patent machine is still churning out new claims. October, pages 44-47.

Sreenivasan, S.V., C. Grant Willson, and Douglas J. Resnick

Small Print To make more powerful computer chips, researchers are developing nanoscale tools. *Nanotechnology*, April, pages 4-6.

Suhir, Ephraim

Crossing the Lines Or should we just mind our own business? September, page 39.

Teska, Kirk

'Control' Means What? A recent court decision brings some traditional patent claim language into doubt. *Engineering Management*, July, pages 16-17.

Thilmany, Jean

A Certifiable Manager An ASME program, expected to begin next year, addresses the particular needs of engineers in the management seat. *Engineering Management*, March, pages 12-13.

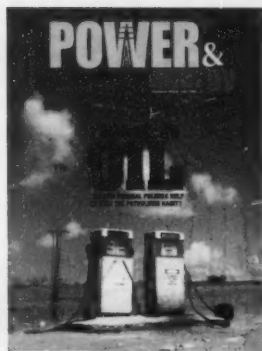

A Decade Down the Line ASME plans a major organizational makeover to face the world 10 years from now. *Engineering Management*, March, pages 9-10.

A Few Inches Off the Ground, February, page 72.

Flowing Into the Future Where does virtual reality meet CAD,

October

Power & Energy/October

November

Management/November

CFD, and FEA? In a futuristic technology poised to accelerate mechanical engineering. February, pages 26-29.

Going Soft Good engineers don't necessarily make good managers. But fear not—you can learn to lead. *Engineering Management*, March, pages 4-8.

Hooked Up Taking a page from dating services, buyer and supplier find each other on the Internet. April, pages 28-30.

How Does Beckham Bend It? April, page 72.

Information in Order Product lifecycle management systems are touted as tools for collaboration, but they're used for much more than that. September, pages 46-48.

Intelligent Outfits, December, page 84.

Linking Up Successfully combining project and product management spells marketability. *Engineering Management*, July, pages 4-6.

New Skill Sets A growing area of graduate education mixes the art of management with the technology of engineering. *Engineering Management*, July, pages 12-14.

One for the Little Guy Small to midsize enterprises are linking their manufacturing and engineering departments with technology formerly reserved for the largest. January, pages 37-39.

Share the Wealth A retiring engineer has quite a bit of on-the-job experience, and Honeywell is intent on preserving that know-how. December, pages 32-35.

Showing Up Happy How can you keep your employees content and productive? Some successful managers share their tips. *Engineering Management*, November, pages 3-5.

Surgical Analysis Engineering technology gets more work in the operating room. August, pages 30-33.

Swim Like the Sharks, May, page 68.

Taking the Mechanical Pulse Data acquisition systems go well beyond just counting the numbers. May, pages 33-35.

Taming the Technological Frontier A student of disaster recommends teamwork and openness as a recipe to avoid serious breakdowns. March, pages 40-42.

Turn On the Light Engineers had worked the same way for more than 500 years—until the events of 40 years ago shook things up. *Mechanical Engineering Design*, February, pages 8-11.

Virtually Edison Analysis software makes it easy to experiment early and often. October, pages 36-37.

What Do You Know? Employers hire engineers based on the CAD package they know. Or, they don't. June, pages 24-26.

You Gotta Pay to Play As top dogs, automakers set the rules that their suppliers must follow. November, pages 39-41.

Walker, James D., and Donald J. Grosch

The Trail to the Leading Edge Detective work in San Antonio

led to understanding the loss of *Columbia*. March, pages 28-31.

Wicks, Frank

A Model Mission? Opening the second century of flight, a team sends a small plane 1,900 miles across the Atlantic—with no one on board. December, pages 44-46.

Nuclear Navy A half-century ago this month, the *Nautilus* set a new course for the Atomic Age. January, pages 30-36.

Picture This Scientist? Businessman? The inventor who popularized photography spent his fortune well. July, pages 32-35.

Winters, Jeffrey

Bad Vibrations Currents pluck the strings, and drillers try to stop the music. July, pages 30-31.

Biological Fire Alarm One research team has demonstrated that a cantilever device can pick up the addition of a single virus's worth of mass. *Nanotechnology*, April, page 12.

A Case of the Vapors An increasing reliance on gasoline imports puts another uncertain link in the U.S. fuel supply chain. December, pages 28-31.

Decision 2004: Energy Debate *Power & Energy*, Oct., pages 12-13.

Hotcase A national lab is revisiting the past to find new methods of putting uranium into reactors. January, pages 26-29.

Math Whiz, August, page 72.

Points of Light Nanodots glow in the dark—or eliminate the dark entirely. *Nanotechnology*, September, page 9.

Power Window Joule box. *Power & Energy*, June, page 24.

Power Window Bottom of the barrel? *Power & Energy*, October, page 24.

Ready When You Are? A professor in England thinks he has a solution to commuting woes: a personal, rapid transit system. *Mechanical Engineering Design*, February, pages 30-33.

Three Mile Island Two hours and 20 minutes to wreck a core. *Power & Energy*, October, pages 6-10.

Two Strokes Against It Manila was choking, so they modified a three-wheeler's engine. *Power & Energy*, March, page 24.

Wolcott, Barbara

The Breaks of Progress Finding out what went wrong is the first step in getting to the next level. March, pages 32-35.

City Lights A California city taps its natural resources to make green, reliable energy. *Power & Energy*, June, pages 20-22.

Woods, Robert O.

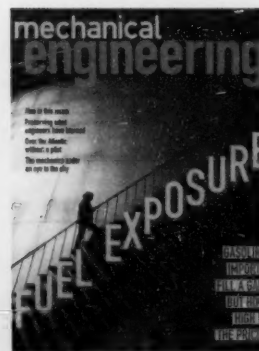

Tutankhamen's Tribology Mechanical problems had to be solved even back in the days of wooden chariots and leather bindings. November, pages 42-44.

Zhang, Yuanhui, Kim Ocfemia, and Malia Appleford

Swine Oil Industrial farming has a waste problem, but new technology can convert it into oil. *Power & Energy*, June, pages 12-17.

Zychinski, Steven M.

No Gear is an Island A system is the sum of all its parts, both good and bad. June, pages 34-36.

December
